Example Use Case

1a. Use Case Number:	9		1b. Use Case Title:		Log in
2. Level:	Summary		User-level		Subfunction
3. Actor:	Any user				
4. Goal:	The user logs in to authenticate his or her role in the system and to perform a task in the system.				
5. Preconditions:	A user account has been created for the user.				
6. Success Guarantee:	The user can successfully access the system and perform actions appropriate for his or her role.				
7. Main Success Scenario (MSS):	1. The user connects to the system. 2. The user enters his/her username and password. 3. The system validates the username and password. 4. The system determines the user's role. 5. The system displays a list of actions the user can perform based on the user's role.				

8. Extensions:	3a. The system determines that the password is incorrect for the username entered.
	
	    1. The system prompts the user to re-enter the password.
	        3a1. The system determines that the re-entered password is incorrect.
	    2. The system provides the option for the user to retrieve a forgotten password.
	3b. The system determines that the username does not match a username for any account.
	    1. The system displays an error message.
	4a. The system determines that the user has no role assigned in the system. The system does not allow the user to access the system.				

9. Notes/Issues/ Reviewer Comments:	This use case is the same for iHRIS Manage, Qualify and Plan.
